EDUCATION

University of Southern California (USC), Los Angeles, CA

B.S. in Computer Science

Expected Graduation: May 2026

- Relevant Coursework: Data Structures and Algorithms, Database Systems, Machine Learning, Operating Systems, Web Development, Probability and Statistics
- GPA: 3.7 / 4.0

EXPERIENCE

Software Engineering Intern, Acme Labs

Los Angeles, CA | June 2024 – August 2024

- Built and documented RESTful APIs with FastAPI and PostgreSQL to support internal data tools used by analysts across the company.
- Implemented background tasks and caching that reduced average API latency by ~30% for high-traffic endpoints.
- Wrote unit and integration tests (pytest) and integrated them into the team's CI pipeline on GitHub Actions.

Undergraduate Research Assistant, USC Viterbi School of Engineering

Los Angeles, CA | January 2024 – Present

- Assisted in building a prototype recommendation system for educational content using Python, PyTorch, and FAISS.
- Cleaned and processed large event logs (millions of interactions) and implemented feature pipelines with pandas and scikit-learn.
- Evaluated models with ranking metrics (NDCG, Recall@K) and prepared result summaries for weekly lab meetings.

PROJECTS

USC Course Planner – Full-Stack Web App

- Developed a web app to help USC students plan semester schedules and check prerequisite chains.
- Backend built with FastAPI and PostgreSQL; frontend built with React and TypeScript.
- Implemented search and filtering by department, difficulty rating, and time slot; deployed on AWS using Docker and ECS.

Image Classification Pipeline

- Trained convolutional neural network models with PyTorch to classify images from a custom dataset.
- Implemented data augmentation, experiment tracking, and model checkpointing to compare different architectures.
- Exported the best model to ONNX and built a minimal inference service with FastAPI.

SKILLS

Programming: Python, Java, JavaScript / TypeScript, SQL

Frameworks & Libraries: FastAPI, Flask, React, PyTorch, scikit-learn, pandas, NumPy

ML & Data: SentenceTransformers, FAISS, BM25, basic recommendation systems, experiment tracking

Tools & Platforms: Git, GitHub, Docker, Linux, AWS (EC2, S3), PostgreSQL

Other: Data structures and algorithms, object-oriented design, REST API design, unit testing
